

ACP Therapy for Osteoarthritis

Do you feel an uncomfortable pulling sensation in your joint or suffer from joint stiffness in the mornings or discomfort when you first start walking? The cause may well be wear and tear of the joint cartilage, commonly known as osteoarthritis.

ACP therapy offers a natural, biologic therapy approach involving activation of the body's own factors in your blood:

- Outpatient procedure
- Rapid (< 30 min) process
- Active substance is derived from your own body and is therefore well tolerated
- Proven to be effective for mild to moderate osteoarthritis¹

¹ Smith AJSM 2016, Cerza et al. AJSM 2012

The Treatment Process

1. Blood is drawn from a vein in the arm
2. A separation procedure extracts and concentrates the desired body substances (ACP – Autologous Conditioned Plasma)
3. These substances are injected into the affected region
